Phocus — A Beautiful Productivity Timer

Phocus is a simple time management app aimed at helping you be more productive throughout the day.

Nowadays, it can be pretty hard to avoid distraction while you're trying to get stuff done, what with email and Twitter and lolcats just a click away. That's where Phocus comes in.

It splits your workday into a series of timed work periods, each followed by a rest period. Knowing a break is just around the corner makes focusing on your current task a lot easier.

With its prominent timer and color-coded progress bar, Phocus acts as a constant reminder, encouraging you to concentrate and letting you know when it's okay to goof around for a bit.

FEATURES

• Large Countdown Timer
Easily spot your remaining time. (Or hide the countdown if it's distracting you.)

• Color-Coded Progress Bar
As you work, the bar fills up, shifting from red to green. During breaks (blue) and rewards (purple), it empties out. Repeat.

• Pick Your Pace
It's easy to set the work, break, and reward durations to fit your specific needs.

• Enter Your Current Task
It'll show up during work phases, silently nagging you to stop clockwatching.

• Track Your Performance
Keep an eye on the running tallies for your completed and retried phases.

• Persistent Timer
Leave with the timer counting down, and it'll update when you return.

• Local Notifications
When it's closed, Phocus can still alert you to the end of a phase.

• Continuous Play Mode
Allow the timer to automatically continue to the next phase in the background.

• Never Auto-Lock
Prevent your device from falling asleep if you work with Phocus open nearby.

• Alarms, Sound Effects, and Ticking
Sounds are nice, but they're optional. Toggle each independently to your liking.

• Meticulous Design
Every carefully-thought-out pixel really shines, especially on the Retina Display.

• A Delightful Experience
Phocus is made to be as simple, beautiful, and fun to use as possible. Enjoy :)

COMPATIBILITY

Phocus only works on devices running iOS 4.0 and higher.

Although it will run on iPad, Phocus is made specifically for iPhone (3G and higher) and iPod touch (v3 and higher).
